            of the HSp70 sequence to direct other proteins into the cell. It was shown that HSp70 fragments are able to direct other proteins into the cell, a feature which can be used in the treatment of transplant rejection, autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, diabetes, asthma, inflammatory bowel disease, psoriasis, hepatitis, Graves' disease and viteligo, inflammatory diseases including osteoarthritis, pancreatitis and adult respiratory distress syndrome, cancer, vascular diseases (such as restenosis and atherosclerosis) and DNA and RNA viral replication diseases (including herpes)

The likelihood of mammalian fertilisation is decreased by contacting a gamete with a sulphaglycolipid immobilising protein 1 (Silpl)/ Sulphated glyco-moiety interfering composition. The interfering composn. is e.g. the heat shock 70kD protein, Silpl (or analogue such as the mouse Silpl hat shock 70kD protein, Silpl (or analogue and sequence AARA3002) or the 74.5kD mycoplasma protein (AARA3003). (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Š
                                                                                                                                                                                                                                                                            The invention relates to a novel heat shock protein fragment (HSP) that can increase the level of one or more cytckines and/or one or more CC chemokines and/or nitric oxide produced by a cell, above that caused by the corresponding full length heat shock protein. The protein fragment protein fragment is useful in therapy, in treatment or prophylaxis of a disease and in the manufacture of a medicament for prophylaxis of a prophylaxis of a disease such as microbial infection, viral infection, prophylaxis of a disease of the immune system or cancer. The fragment is also useful as an adjuvant in vaccines, preferably, anti-HIV vaccines. The present sequence represents the mouse HSP70 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

HSP70.1 and HSP70.3 are inducible members of the HSP70 family of proteins. The heat shock proteins of the invention are endogenously induced by heat and tumour necrosis factor (TMF). This heat shock protein may be used in a composition which further comprises interferon-gamma, and/or a chemotherapeutic compound. The pharmaceutical composition is useful for the manufacture of a medicament for treating systemic tumour.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                      peptide containing a CTL (cytocoxic T lymphocyte) epitope recognised by cytotoxic T cells and a protein containing the ATPase domain of a heat shock protein. Also described are: (1) a drug composition containing (I) as active ingredient; (2) and (4) a transformant which can retain the containing the DNA of (2); and (4) a transformant which can retain the protozoacide activities, and can be used as a cellular immune response inducer. The protein is useful as an active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer e.g. to provide systemic immunity against leukaemia. The present sequence respectable as a specifically claimed heat shock protein for use in a fused protein of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EGERAMTKDNNLLGRFELSGIPPAPRGVPQIEVTFDIDANGILNVTATDKSTGKANKITI 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents mouse heat shock protein-70.1 (HSP70.1). HSP70.1 and HSP70.3 are inducible members of the HSP70 family of proteins. The heat shock proteins of the invention are endogenously induced by heat tumour necrosis factor (MTP). This heat shock protein may be used in a composition which further comprises interferon-gamma, and/or a chemotherapeutic compound. The pharmaceutical composition is useful for the manufacture of a medicament for treating systemic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      563

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents the human heat shock protein SHSP70 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence. Human heat shock proteins are located on chromosomes 6p21.3-2 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome

                                                                                                                                          용
                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method of identifying compounds that inhibit proliferation of cells comprising contacting a test compound with a cell which overexpresses HBP72 (heat shock protein 72), and determining if the test compound inhibits activity or expression of HBP72.

Optionally, HBP72 is contacted with the test compound under optimum conditions to allow the two components to interact and bind, forming a compitation, comprising compounds that inhibit HBP72-mediated UNK phosphatase comprising a cerivation, comprising contacting a test compound with a cell which expresses HBP72, exposing the cell to a heat induced stress and determining if the compound inhibits UNK phosphatase activity. The invention additionally encompasses compositions comprising an inhibitor of HBP72 or UNK phosphatase activity are useful for inhibiting the proliferation of cells. Modulation of the activity of the UNK phosphatase or HBP72 is used to treat a proliferative disorder use cancers (e.g., leukaemia, lymphoma, solid tumours such as sarcomas and carcinomas, breast cancer, prostate cancer). The compounds that inhibit HBP72 function are administered to a patient compounds that inhibit HBP72 function are administered to a patient of a patient continity or alse in a proposation or a method of HBP72 expression or a method of HBP72 expression or a method of HBP72 expression or a method of indicating and increase of HBP72 expression or a method of indicating and increase of HBP72 expression or a method of indicating and indicated the administered to a patient or a partier or maintenance of HBP72 expression or a method of indicating and increase or disorder mediated by an increase of HBP72 expression or a mediated by an increase of HBP72 expression or a mediated by an increase of HBP72 expression or a mediated by an increase of HBP72 expression or a mediated by an increase of HBP72 expression or a mediated by an increase and increase in a mediated by an increase and increase and increase and increase in a mediated by an increase a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying compounds that inhibit proliferation of cells and capable of modulating the expression of heat shock protein 72 gene and/or activity of Hsp72 useful for treating cancers such as leukemia, lymphoma.
                                              Human Hsp72; heat shock protein 72; chromosome 6p21.3; Hsp72 inhibitor; expression modulator; JNK phosphatase inhibitor; antippoliferative; drug screening; cancer; leuksemia, lymphoma; solid tumour; sarcoma; carcinoma; breast cancer; prostate cancer; premalignant condition.
Human Hsp72 (heat shock protein 72).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example; Fig 16B; 77pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14g22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 EADKKKVLDECQEVISNLDANTLAEKDEFEHKRKELEQVCNPIISGLYQGAGGPGFGFG

```
This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, laber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cyclostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The method is used for diagnosing neoplasia or a susceptibility to neoplasia especially malignant neoplasia, and carcinomas of the breast. Gene or protein therapy of mutated HSC73 is performed by administration of native HSC73, and the transgenic mammal is useful as an experimental model for technical development of gene therapy. The HSC73 gene was transfected into cell lines, which were introduced into test animals. These animals were injected with untransfected cells of a breast cancer line. Expression of wild type HSC73 prevented breast cancer cells forming tumours in the mice. The present sequence represents mouse HSC73 from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a fused protein (1) prepared from a peptide containing a CTL (cytotoxic T lymphocyte) epitope recognised by cytotoxic T cells and a protein containing the ATBase domain of a heat shock protein. Also described are: (1) a drug composition containing (1) as active ingredient; (2) a DNA encoding (1); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the expression vector of (3). (1) has cytostatic, immunostimulant and protozoacide activities, and can be used as a cellular immune response inducer. The protein is useful as an active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer e.g. to provide systemic immunity against leukaemia. The present sequence represente a specifically claimed heat shock protein for use in a fused protein of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel isolated gene sequence that is downregulated in the spinal cord of a mammal in response to mechanically distinct first and second models of neuropathic or central sensitisation pain, useful in the screening of compounds for diagnosing or treating pain. A protein encoded by a gene of the invention has analgesic activity. A polymuclectide of the invention may have a use in gene therapy. The gene sequence is useful for preparing a composition for diagnosing or treating pain. The present sequence represents a protein encoded by a gene of the invention

Compounds which modulate the proteins of the invention may have cytostatic, antiinflammatory, ophthalmological, antiarteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for diagnosing or treating a hypoxia-regulated condition, such as tumourigenesis, anglogenesis, apoptosis, inflammation,

         including processes such as glycolysis, gluconeogenesis, glucose transportation, catecholamine synthesis, iron transport or nitric oxide synthesis. The disease includes cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, recelampsia, atherosclerosis, inflammatory conditions or wound healing. The present sequence is that of a disease related protein of the invention.

The invention comprises a protein complex of human FOXC2 protein and a FOXC2-interacting protein. The FOXC2 protein complex is useful for treating or preventing a medical condition treatable by modulated FOXC2 activity, such as: obesity, hypertrigheriadmia, diet-induced insulin resistance, type 2 diabetes, and anorexia. The present amino acid sequence represents a human FOXC2-interacting protein of the invention.

```

```
This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERAP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antichondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 443

                                                                                                                                       Proteins AAW54349-W54364 are examples of proteins produced in the endometrium during the hyperplasia, adenocarcinoma or proliferative phase of the endometrium. The presence and quantities of these proteins can be detected using 2D gel electrophoresis comparison of cell lysates. The proteins can be used as biochemical markers to detect the phase of the endometrium and can be measured in body fluids, obviating the need for endometrial biopsies

A method of diagnosis performed on a biological sample has been developed comprising detecting the aberrant expression of a gene at the heat shock cognate 73 (HSC73) locus or detecting a mutation at the HSC73 locus. The method is used for diagnosing neoplasia or a susceptibility to neoplasia especially malignant neoplasia, and carcinomas of the breast. Gene or protein therapy of mutated HSC73 is performed by administration of native HSC73, and the transgenic mammal is useful as an experimental model for technical development of gene therapy. The HSC73 gene was transfected into cell lines, which were introduced into test animals. These animals were injected with untransfected cells of a breast cancer line. Expression of wild type HSC73 prevented breast cancer cells forming tumours in the mice. The present sequence represents human HSC73 from the

```
The present invention describes a fused protein (I) prepared from a peptide containing a CTL (cytotoxic T lymphocyte) epitope recognised by cytotoxic T cells and a protein containing the ATPase domain of a heat shock protein. Also described are: (1) a drug composition containing (I) as active ingredient; (2) a DNA encoding (I); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the expression vector of (3). (I) has cytostatic, immunostimulant and protoxoxacide activities, and can be used as a cellular immune response inducer. The protein is useful as an active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer e.g. to provide systemic immunity against leukaemia. The present sequence represents a specifically claimed heat shock protein for use in a fused protein of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of human heat shock protein (HSP) Hsc70, a constitutive form of a Hsp70 family protein. The invention relates to complexes of peptide-binding fragments of HSPs with antispenic molecules and their use in immunotherapy for the treatment of infectious diseases and cancer. Claimed methods of treating or preventing cancer/infectious disease involve culturing a cancer cell/infected cell transformed with a nucleic acid encoding a HSP peptide-binding domain, recovering complexes of the HSP fragments noncovalently associated with peptides from the cancer cell/infected cell, and administering the recovered complexes. These methods can use Hsc70 peptide-binding fragments complexes. These methods can use Hsc70 peptide-binding fragments comprising amino acids 391-615 and 406-443 of the present sequence, i.e. the peptide-binding core
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 KSENVQDLLLLDVAPLSLGLETAGGVMTALIKRNSTIPTKQTQIFTTYSDNQPGVLLQVY

The invention relates to pharmaceutical compositions comprising peptide

binding fragments of heat shock proteins (HSPs) and non-covalent

complexes of HSP peptide-binding fragments (HBPs) in non-covalent

association with antigenic molecules. Vaccines comprising peptide

fragments of the invention may be used to stimulate an immune response,

fragments of the invention may be used to stimulate an immune response,

crimicular cytocoxic T cell responses against cells infected with

viruses (including hepatitis type A, B and C, influenza, varicella,

adenovirus, herpes simplex (HSV) type I and type II, rinderpest

crimicovirus, papova virus, papilloma virus, respiratory syncytial virus, mumps

virus, papova virus, papilloma virus, arbovirus, cytomegalovirus,

cohinovirus, huntavirus, coxsackie virus, measles virus, rubella virus,

polio virus, HIV-I, and HIV-II; bacteria including (including including Leishmani, Kokzidioa and Trypanosoma) and intracellular

concertioning chelshmani, Kokzidioa and Trypanosoma) and intracellular

concert breast cancers such as human sarcomas and carcinoma, papillary

cancer, breast cancer, ovarian cancer, prostate cancer, squamous cell

cancer, basal cell carcinoma, andencarcinoma, sweat gland carcinoma,

concert and carcinoma, appillary carcinoma,

concert and carcinoma, appillary carcinoma,

concert and carcinoma, appillary carcinoma,

concert and carcinoma, appillary carcinoma,

concert and carcinoma, appillary carcinoma,

concert and carcinoma, appillary carcinoma,

(unknown function) interactions. The protein complexes are useful for diagnosing physiological generative disorders, drug screening for agents that modulate the interaction of the proteins (thus identify drug targets), and identifying additional proteins in the pathway common to the proteins. These physiological disorders include non-insulin dependent dispaces mellituae (NIDDM), neurodegenerative disorders (e.g. Alzheimer's disease), inflammatory diseases (e.g. rheumatoid arthritis and inflammatory bowel disorder) and other human disease such as theroscalerosis, cardiac hypertrophy and hypoxic brain injury. This sequence represents heat shock protein 8 (Hap8) residues 260-533 of which binds to the bait protein MAPKAP-K3 (see ABK13301 for nucleotide signal transduction pathways and forms an interaction claimed in claim 1 of the invention. Note: This sequence does not appear in the specification but has been obtained from a reference given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Munication describes apported to the property formulations of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the

The invention describes an isolated protein complex, comprising two proteins. The protein complex comprises; protein winnes MAPKAP-K3 and APD-3 adaptor complex delta sub-unit; MAPKAP-K3 and amyloid A4 precursor protein, APP-695; MAPKAP-K3 and heat shock protein (Hsp) 8; leucine rich Lialo and NY-KRN-58; P38 Alpha and P38 Betein kinsse EKK3 and KIAAA0934 (unknown function); EKK3 and cell cycle dependent kinsse (CDK) 9; ERK3 and protein kinsse CLK; C-NAP-1 and Clathrin heavy chain; C-NAP-1

The present invention relates to the isolation of human nuclear factor-
kappaB (NR-kappaB) associated polypeptides and polynucleotides. The NR-
kappaB associated polypeptide and polynucleotide sequences are useful for
preventing, treating or ameliorating various disorders including immune
cdisorders, inflammatory disorders, cancers, disorders relating to
aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas,
cd aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas,
cd appalasia, x-linked anhidrotic ectodermal dysplasia, immunodeficiency, al
chappatitis B, hepatitis (e.g. those caused by human
cnontinentia pigmenti, viral infections (e.g. those caused by human
cnontinentia pigmenti, viral infections (e.g. those caused by human
cnottinentia pigmenti, viral infections (e.g. those caused by human

The invention relates to the isolation of novel genes (ACF3446-ACF34559) encoding proteins (ABR64180-ABR64281) involved in the process of angiogenesis. The nucleic acid molecules are useful in identifying and/or obtaining full-length human genes involved in an angiogenic process. The nucleic acid molecule, polypeptides or complexes encoded, cells or the screening of candidate pharmaceutical compounds used in treating angiogenesis-related disorders. They are also useful for diagnosing, prognosticating or treating an angiogenesis-related disorder, which involves uncontrolled or enhanced angiogenesis or is a disorder in which a decreased vasculature is of benefit (e.g. cancer, rhematoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                benefit (e.g. ischemic limb disease or coronary artery disease). The modulator of expression or activity of the polypeptide encoded by the mucleic acid sequence is useful for manufacturing a medicament for the treatment of an angiogenesis-related disorder. This sequence corresponds to one of the novel angiogenic protein
                                                                                                                                                                                                                                                                               antipsoriatic; antiarteriosclerotic; cardiant; vasotropic; anglogenesis; gene therapy; vasculature; cancer; rheumatoid arthritis; psoriasis; diabetic retinopathy; cardiovascular disease; atherosclerosis; ischemic limb disease; coronary artery disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diabetic retinopathy, psoriasis or cardiovascular diseases such as atherosclarosis), or involves inappriately arrested or decreased anglogenesis or is a disorder in which an expanding vasculature is of benefit (e.g. ischemic limb disease or corrections).

```
The invention relates to a mammalian cell receptor, useful in the treatment of cancer, which binds to tumour associated lipids and induces anergy or apoptosis in the T cells and antigen presenting cells (APCS). Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, producing (MI) a tumouricidal immunocyte population in vivo in a mammal (by allowing tumour associated lipids to contact immunocytes in which receptors for immunosuppressive fatty acids, ceramides, alycolipids, sphingolipids, glycosphingolipids, phosphosphingolipids, gangliosides, sialylated glycans, lipopeptides and proteoglycolipids are inactivated or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tumour associated antipoputation of the munocytes in which adaptor proteins which inhibit T cell activation by tumour associated antigens are deleted or functionally deactivated) and producing (M7) a tumouricidal T cell population ex vivo in a mammal comprising allowing a superantigen-lipid raft conjugate to contact immunocytes in vivo. The receptors, methods and compositions are useful for treating cancers and tumours. Bacterial superantigens are co-administered or administered as fusion constructs with anti-tumour proteins or motifs. The present or incorporated into a fusion construct with a superantigen. The invention relates to a novel tumour antigenic peptide or polypeptide comprising a sequence selected from 99 sequences fully defined in the specification. The tumour antigenic peptide or polypeptide comprises a sequence selected from 99 sequences fully defined in the specification, where the tumour antigenic peptide preferably has a sequence of Glu-Properted-Lan-Ser-Gln-Glu-Hra-Phe, and the polypeptide preferably has a sequence comprising amino acids fully defined in the specification. The invention further provides a cancer vaccine comprising a tumour antigenic peptide, polypeptide, which has eyfostatic activity. A tumour antigenic peptide, polypeptide, its encoding polymuclectide, a net peptide, a recombinant vector containing the useful for screening for compounds that interact with the tumour antigenic peptide, the polypeptide or its encoding polymuclectide and increases the expression of the tumour antigenic peptide, the polypeptide or its encoding polymuclectide is useful for inducing cycloxic 7 cells the tumour antigenic peptide is useful for treating cancer such as colon, mouth, lung, containing the containing the useful for treating cancer such as colon, mouth, lung, containing the containing cancer such as colon, mouth, lung, containing the containing cancer such as colon, mouth, lung, containing cancer such as colon, mouth, lung, cancer is a sequence of cancer and cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TNDKGRLSKEEIERMVQEAEKYKAEDEVQRERVSAKNALESYAFNMKSAVEDEGLKGKIS 180

                                                                                                                                                                                                                                                                                                                                                                                                                                               New receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumor associated antigens, useful for treating a neoplastic disease or tumor, and infectious diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease tumour (cancer), and infectious diseases. This sequence represents a protein associated with superantigens used to generate antitumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 KSENVQDLLLLDVAPLSLGLETAGGVMTALIKRNSTIPTKQTQIFTTYSDNQPGVLIQVY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel peptide derived from inducible heat shock protein Hap70, useful for inducing cytotoxic I lymphocyte response that targets cells expressing inducible Hsp70, and for preparing drugs for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a peptide comprising a sequence of at least 8 contiguous amino acids, having at least 65 % identity to a portion inducible heat shock protein (Hsp) -70 sequence, differing from a sequence of constitutive heat shock protein Hsc70 by at least one amino acid, and capable of inducing cytotoxic T lymphocytes that specifically Trecognize cells naturally producing inducible Hsp70, in vitro or in vivo. The peptides are stable, and has high affainty for human leukocyte antigen (HLA) class I molecules. The present sequence represents Hsc 70.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EGERAMTKONNLLGKFELTGIPPAPRGVPQIEVTFDIDANGILNVSAVDKSTGKENKITI 503

This invention relates to novel mitochondrial targets that can be used afor therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), mycolonic epilepsy ragged red fibre syndrome (MERR) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic,
                                                                                                                                                                                                                                                    Leber's hereditary optic neuropathy; LHON; and stroke; MELAS; mitochondrial encephalopathy lactic acidosis and stroke; MELAS; myoclonic epilepsy ragged red fibre syndrome; MERRF; cancer; neuroprotective; noctropic; antidiabetic; anticonvulsant; antiarthritic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                    Human heat mitochondrial protein as a therapeutic target SeqID703.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Glenn GM;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type for treating liver disorder such as hyperlipidaemia, hypertension, type indiabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of screening several molecules or compounds to identify a ligand which specifically binds a cDNA. A protein encoded by the cDNA is useful for specifically binds a cDNA. A protein encoded by the cDNA is useful for compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the cDNA with several of molecules or compounds under conditions to allow specific binding, and detecting specific binding between the protein and a compound, therefore identifying a ligand which specifically binds the protein. The composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition the sequence represents the amino acid commulate prognosis and to design a treatment regimen and to monitor the efficacy of treatment. The present sequence represents the amino acid sequence of a protein encoded by a cDNA differentially expressed in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WI;

The invention is based on the discovery that HSC70, a normally intracellular protein, is expressed in full length on the cell surface of neoplastic cells and damaged cells, and is expressed more abundantly on the cell surfaces of multidrug resistant (MDR) neoplastic cells and MDR damaged cells. Although lower levels of HSC70 are expressed on the cell surface of drug-sensitive neoplastic cells, in contrast to other cell surface MDR markers such as P-glycoprotein, HSC70 is expressed in only negligible amounts on the cell surface of normal cells of the body. Thus, the invention provides a method for detecting multidrug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detecting multidrug resistance/multidrug resistance potential in test

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               resistance in a test neoplastic cell by measuring the level of cell surface-expressed HSC70 protein. The neoplastic cell is especially a breast cancer, ovarian cancer, mysloma, melanoma, sarcoma, leukaemia, retinoblastoma, hepstoma, glioma, mesothalioma or carcinoma cancer cell, or from a tissue selected from blood, bone marrow, spleen, lymph node, liver, thymus, kidney, brain, skin, gastrointestinal tract, eye, breast, prostate and ovary. The invention also provides a cell surface HSC70-targeted agent for treatment or prevention of an MDR neoplasm. This may include an HSC70 binding component and a therapeutic component such as a chemotherapeutic agent or radioisotope. Vaccines for treating or preventing MDR neoplasms comprise a HSC70 polypeptide or, in the case of DNA vaccines, a nucleic acid sequence encoding HSC70.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                     The present invention relates to a polynucleotide for preventing, treating or diagnosing a disease in an individual. The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of inhibiting the function of the corresponding gene, or capable of inhibiting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein
                                                                                                                                                                                                                                                                                                                                                       KSENVODLILLDVTPLSLGIETAGGVMTVLIKRNTTIPTKOTQTFTTYSDNQPGVLIQVY

                                                                                                                                            The present invention relates to a polynucleotide for preventing, treating or diagnosing a disease in an individual. The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of affecting the function of the corresponding gene, or capable of inhibiting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     443

The present invention describes an isolated PRO nucleic acid (I). Also described: (1) a vector comprising (I); (2) a host cell comprising the vector of (1); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the polypeptide of (4) fused to a heterologous amino acid sequence; (6) an antibody which specifically binds to a polypeptide of (4); (7) a composition of matter comprising a polypeptide of (4); (7) a agonist or antagonist of the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide or an antibody that inhibits or in a sample suspected of having the polypeptide; (11) a method of identifying a compound that inhibits or in a mammal; (12) a method of stimulating the inflammatory immune response in a mammal; (12) a method of stimulating the immune response in a mammal. The process thave antiallarycic, antianaemic, antiabratic, antidiabetic, antianaemic, antiabratic, antidiabetic, antianaemic, antiabratic, antidiabetic, antianaemic, antiabratic, antiabratic, antianaemic, and can be used in gene therapy. The nucleic acid (1) and the encoded polypeptides, compositions, kits and methods are useful in diagnosing and treating an immune related disease and in summane related disease and in mammal response. The present sequence represents a human
                                                                                                                                                                                                                                                             New PRO polynucleotides and polypeptides, useful in useful in diagnosing and treating an immune related disease, e.g. systemic lupus erythematosus, rheumatoid arthritis, diabetes mellitus or asthma and in stimulating an immune response.

polypepture is useful for treating an immune featere missure properties to use use the useful for the properties is a spondyloarthritis, osteoarthritis, invenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic inflammatory wyopathy, Signer's syndrome, systemic sclerosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous a chronic inflammatory demyelinating polyneuropathy, dialilain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primmary biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's disease, autoimmune or immune-mediated skin disease, a bullous skin disease, erythema multiforme, contact dermatitis, psoriasis, an allergic disease, asthma, allergic rhinitis, atopic dermatitis, food hypersensitivity, urricaria, an immunologic disease of the lung, cosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary expresents appropriate or presents appropriate or preparents appropriate or preparents appropriate or preparents expresents appropriate or preparents appropriate appropriate or preparents appropriate appropriate appropriate appropriate appropriate appropriate appropriate appropriate appropriate appropriate appropriate appropriate appropriate appropriate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antirheumatic, immunosuppressive, osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic, antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide of the invention may have a use in gene therapy. The PRO polypeptide, agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral
                                                                                                                                                                                                                                                       PRO; antiinflammatory; antiarthritic; antirheumatic; immunosuppressive; osteopathic; antidiabetic; dermatological; antipsoriatic; antiallergic; antiasthmatic; hepatotropic; respiratory; gene therapy; immune system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention relates to a novel isolated nucleic acid and the PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Van Lookeren M, Williams PM, Wood WI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 7; SEQ ID NO 1298; 2940pp; English.
                     ADP24120 standard; protein; 646 AA.
                                                                                                                                                                                             PRO polypeptide SEQ ID NO:1298.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-OCT-2003; 2003WO-US034312.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-NOV-2002; 2002US-0423394P.

cuberances computates intrumaciang a test Compound with a cell, that synthesises at least one specific peptide or profesin, then measuring either binding of test compound to the protein or a functional parameter that is altered by the binding. The protein or a functional parameter that is altered by the binding. The protein or a functional parameter that is altered by the binding. The protein or containing protein, interleukin 6 receptor subunit beta, aspartate containing protein, interleukin 6 receptor subunit beta, aspartate sainortansferase, neuronal immediate early gene, heat shock protein 27, HSC70, calmodulin, syntaxin binding protein 1, spliceosomal protein 3AP (15, neurodap 1, bamacan, leukoriene A4 hydrolase, chondromodulin 1 SAP (15, neurodap 1, bamacan, leukoriene A4 hydrolase, chondromodulin 1 CC MSS4/phosphatidylinositol-4-phosphate 5 kinase, 265 proteasome UE pl12 or UE Z or UE P44.5, ingensin, 3-hydroxy-3-methylgluaryl-Co A synthase, chospholycerate kinase, RNA polymerase II TF SIII pl8 UE, protein 1 protein, ortholog of the Drosophila gene 'spaghetti', protein with 4-cc protein, ortholog of the Drosophila gene 'spaghetti', protein with 4-cc alnexin -t, sorting nexin 3, glia-derived nexin precursor, microtubulic associated protein 4, to CC 10, transcription co-activator CRSPISO, JUBKY, CXM-209528, TF SOXIO, SOUL protein, rRNA intron-encoded homing endounclease, epithelial cell growth inhibitor, glutathione transferase (16) The specified nucleic acids and proteins and proteins and identified using the restriction fragment differential display PCR method (Biochem. Biophys. Res. Commun., 234 (1997) 16), applied to rats in which compute identified by the new method, also specified polymucleotides, their antisense sequences, encoded proteins and proteins addinance and calls, are useful as therapeuric and againstic agents.

The inversion relates to systems, methods and reagents for cell-based screening or detection of compounds which affect particular biological functions. The methods of the invention utilise fluorescent biodecector calcelular distribution of at least the fluorescent cause an alteration in the cellular distribution of at least the fluorescent cause an alteration in the cellular distribution of at least the fluorescent proteins (HSPS) fused to a fluorescent protein (e.g., jellyfish green fluorescent protein (GPP), or derivatives thereof). Such biosensors are located in the cytoplasm, but on stress activation translocate to the nucleus. In another embodiment biodetector proteins can be used to detect protease activity. Such protease biodetector fusion proteins comprise one or more fluorescent proteins, a recognition signal which is cleaved by the protease; and at least one cellular localisation signal. The latter two components may be from heterologous sources. Due to the localisation signal, the biodetector protein is localised to a particular region of the cell. Once acted on by the protease of interest, the fluorescent protein is cleaved from the localisation sequence, and is free to migrate to other locations within the cell. The presence of a second localisation signal attached to the fluorescent protein enables the fluorescent protein to be directed to a different cellular compartment after cleavage of the protease recognition rem be detected to the biosensors of the invention can be detected to investigate a wide range of activities and to screen componence of spatial resolution. The methods and biosensors of the invention of help with a high degree of spatial resolution. The methods and biosensors of the invention of help with a might degree of spatial resolution. The methods of protein collular proprietions containing methods with a high degree of spatial resolution. The methods of protein containing methods with a high degree of spatial resolution. The methods of the protease of the protease of patial reso extraction, data analysis and automation, resulting in increased quantity and speed of data collection and faster evaluation of drug candidates. Sequences AAB22860-B22876 and AAB22936-B22941 represent biosensor fusion proteins produced in an exemplification of the invention. (Updated on 12-SEP-2003 to standardise OS field) activities. Biosensors containing a recognition site for caspase, for example, may be used for the screening of compounds which modulate apoptosis, while biosensors containing other protease recognition sites may be used for the detection of proteolytic toxins (such as anthrax lethal factor). The method provides improved target validation and candidate compound optimisation by combining many cell screening formats with fluorescence-based molecular reagents and computer-based feature invention relates to systems, methods and reagents for cell-based

The invention describes methods of automated detection, classification and identification comprising treating cells containing luminescent reporter molecules (I) in array of locations with a test substance, where (I) are detectors, classifiers or identifiers, imaging cells in each location to obtain luminescent signals and converting optical information into digital data to interpret presence of toxins in the test substance.
                                                                                                                                                237

ribosylating toxins, cytotoxic phospholipases, and exfoliative toxins. Three classes of cell-based luminescent reporter molecules such as detectors, classifiers and identifiers are described and serve as reporters of toxic threat agents. The first two levels of characterisation ensure a rapid readout of toxin class without sacrificing the ability to detect many new mutant toxins or dissect several complex mixtures of known toxins. This is the amino acid sequence of a biosensor associated with the protease blosensor of the invention
                                                                                                                                                                                                                                                               687

                                                                                                                                                                                                                                                                                                                                                                         98 TATDKSTGKANKITITNDKGRLSKEEIERWVQEAEKYKAEDEVQRERVSAKNALESYAFN 157
                                                                                                                                                                                                                                                                                                                                                                                                                 225
                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                    97
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determination of difference in expression level of specified genes in inflamed and non-inflamed skin sites for diagnosis and examination of atopic dermatitis and psoriasis.

                    This invention relates to a novel method for the examination of atopic dermatitis in which the expression level of specified genes in specimens of skin taken from inflamed (rash) areas and non-inflamed areas is compared and the presence of increased or reduced expression in the inflamed areas determined. The invention may be useful for the development of compounds with a dermatological, antinflammatory or antiposoriatic activity acting as inhibitors and etimulators of genes involved in atopic dermatitis and psoriasis. The invention may be useful for treatment, prevention, diagnosis and assessment of atopic dermatitis and psoriasis. The present sequence is that of an atopic dermatitis and psoriasis. The present sequence is that of an atopic dermatitis related protein which was used in the exemplification of the invention.

The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method for compounds to identify a ligand which specifically binds a cDNA. A protein encoded by the cDNA is useful for high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the cDNA with several of molecules or compounds under conditions to allow specific compounds to indentify a least one ligand which specifically binds the protein encoded by the cDNA with several of molecules or compounds is useful for detecting and molecule or compound, therefore identifying a ligand which specifically chinds the protein. The composition is useful for detecting and quantifying differential gene expression, can be used in gene therapy, to formulate prognosis and to design a treatment regimen and to monitor the efficacy of treatment. The present sequence represents the amino acid sequence of a protein encoded by a cDNA differentially expressed in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

This invention relates to novel human genes and gene product which are implicated in certain disease states. Compounds which modulate the proteins of the invention may have cytostatic, antifilammatory, captual manalogical, antiarteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention may be useful for diagnosing or treating a hypoxia-regulated condition, such as tumourigenesis, anological response to hypoxia conditions, including processes such as glycolysis, glucose transportation, catecholamine synthesis, iron transport or nitric oxide transportation, as glycolysis, incomedence or nitric oxide injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis, inflammatory conditions or wound healing. The present sequence is that of a disease related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EGERAMTKDNNLLGRFELSGIPPAPRGVPQIEVTFDIDANGILNVTATDKSTGKANKITI 120

This invention relates to novel human genes and gene product which are implicated in certain disease states. Compounds which modulate the proteins of the invention may have cytoetatic, antinfinamentory, ophthalmological, antiarteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for diagnosing or treating a hypoxia-regulated condition, such as tumourigenesis, anglogenesis, apoptosis, inflammation, erythropoiesis, or the biological response to hypoxia conditions including processes such as glycolysis, glucomeogenesis, glucose transportation, carecholamine synthesis, iron transport or nitric oxide synthesis. The disease includes cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis, allowed to the conditions or wound healing. The present sequence is that of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                235

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EGERAMTKDNNLLGRFELSGIPPAPRGVPQIEVTFDIDANGILNVTATDKSTGKANKITI 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel human polynuclectide and the encoded polypeptide. A polynuclectide of the invention may have a use in gene therapy. An oligonuclectide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynuclectide or as a probe for detecting the polynuclectide. The polynuclectides ADM01316-ADM01378 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM013759-ADM06201 encoded by the polynuclectides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 KSENVODLLLLDVAPLSLGLETAGGVMTALIKRNSTIPTKOTQIFTTYSDNQPGVLIQVY

The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that is differentially expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal composition of the expression of a polymucleotide sequence which is differentially expression of a polymucleotide sequence which is differentially expression of a polymucleotide sequence which is differentially composition, a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition or small molecule that regulates the activity in an animal of one or more of the polympeptides or their antibodies. The polymucleotide or the compound that composition of pain and a pharmaceutical composition comprising the one or more pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene conting pain. CCI) and spared nerve injury (SNI)) in an animal contraction injury (CCI) and sequence presented is a rat protein (described in Table 3 of therapy). The sequence presented is a rat protein (described in Table 3 of therapy). The sequence presented is a rat protein (e.g. gene context) and spared nerve injury (SNI) in an animal (e.g. gene context) and spared nerve injury (SNI) in an animal (e.g. gene context) and spared nerve injury (SNI) in an animal (e.g. gene context). The sequence data for this pa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                               Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.

comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the restriction, a method for producing a pharmaceutical composition, a compound of or identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating or perint of the polypeptides or their antibodies. The polymucleotide or the compound that collipses or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating collipses or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating collipses. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the wipo.int/pub/published_pot_sequences.

The invention discloses a composition comprising two or more isolated rat cor human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a gent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the regulates the activity in an animal of one or more of the regulates the activity in an animal of one or more of the regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating conjugates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides specification) which is differentially expressed during pain.

Colyperication, but was obtained in electronic form directly from Wipo at the specification, but each polymucleotice of the sequence 
                                                                                                                                                                                                                                                                                                                                                        New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 1; Page; 1017pp; English.

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a sequence that is differentially repressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates to subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynucleotides or method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating compulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polynucleotide or the compound that computed to graph and a pharmaceutical composition comprising the one or more computation; and exparancent nerve injury (CNI) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal nerve injury (SNI)) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. specification, but was obtained in electronic form diving fine with partner of the specification, but was obtained in electronic form directly from WIPO at fip. without int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                       Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention May have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides and polypeptides are useful in gene therapy, developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
```

```
method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene the raperitication) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      446

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHOM), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERAP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antidiabetic activities. This polypeptide sequence is a human heart.

The composition of the invention.

This invention relates to novel mitochondrial targets that can be used after therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, asstearthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRE) or cancer. Accordingly, these
                                                                                                                                                                                                                                                                                                                                                                             Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       626
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EGERAMTKDNNLLGRFELSGIPPAPRGVPQIEVTFDIDANGILNVTATDKSTGKANKITI 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EQDKAKILDKCQEVINWLDRNQMAEKDBYEHKQKELERVCNPIISKLYQGGPGGGGGG

The interfering compon. is e.g. SLIPI (or analogues such as the mouse SLIPI analogue "HSC708" comprising the amino acid sequence ARR430021. SLIPI binds to sulphogalactosylglycerolipid (SGG), a testular glycolipid, and to sulphogalactosylglycerolipid (SGG), a certular glycolipid, and to sulphogalactosylglycerolipid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               remembers in rerrilisation decrease for detecting and treating infertility using sulpho glyco lipid immobilising protein 1-sulphated-glyco moiety interfering compsn., for mycoplasma infection treatment.

The invention discloses a composition comprising two or more isolated rate or human polynuclectides or a polynuclectide which represents a fragment, cor human polynuclectides or a polynuclectide which represents a fragment, claimed are a vector comprising the movel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a chief increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynuclectides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polypeptides given in the appropriate or method for identifying a compound useful in treating expressed for identifying a compound or small molecule that regulates the specification, a method for identifying a compound useful in treating pain segmental nerve injury (CNI) and appared nerve injury (SNI) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal sequence data for this patent did not form part of the printed the sequence data for this patent did not form part of the printed specification) which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                 Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ftp.wipo.int/pub/published_pct_sequences

Novel heat shock protein fragment useful for treating microbial infection, viral infection or cancer, that can increase the level of cytokines and/or CC chemokines and/or nitric oxide produced by a cell.

Example 3; Page 17-20; 30pp; English.

The invention relates to a novel heat shock protein fragment (HSP) that can increase the level of one or more cytokines and/or one or more CC chemokines and/or nitric oxide produced by a cell, above that caused by the corresponding full length heat shock protein. The protein fragment protein fragment is useful in therapy, in treatment or prophylaxis of a disease and in the manufacture of a medicament for treatment or prophylaxis of a disease such as microbial infection, viral infection, prophylaxis of a disease such as microbial infection, viral infection, adjuvant in vaccines, preferably, anti-HIV vaccines. The present sequence represents the xenopus HSP70 protein

According to the legend of Fig 2, the G. gallus HSP sequence has 635 amino acid residues, the sequence itself has only 634, including "0" (?) are postition 634. Fig. 2 provides an alignment of heat shock proteins from a variety of organisms: 1. M. hyopneumoniae (Mryhsp70 - AAR03922); 2. Bacillus megaterium (Bmehsp70 - AAR03923); 3. E. coli (dnaK - AAR03924); 4. T. cruzi (tc70kd - AAR03925); 5. T. cruzi (ARA03925); 6. Rat rattus (rathsp70 - AAR03927); 7. Xenopus priss (x170 - AAR03928); 8. Hono sapiens (humhsp70 - AAR03921); 9. Gallus gallus (chkisp70 - AAR03930); 10. Zea mays (mzehsp70 - AAR03921); 11. Serratia marcescens (smahsp70 - AAR03931); rhe proteins having homology to hsp's of T. cruzi can be used in vaccines and diagnosis involving e.g. Trypanosoma, Mycoplasma and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Proteins homologous to heat shock proteins of Trypanosoma cruzi - used in vaccines and diagnosis for species of e.g. muco-plasma or mycobacteria.
